Ayush Naithani

Bangalore, Karnataka | +91-8810406697 | naithaniayushh@gmail.com | LinkedIn | LeetCode

Experience

Senior Software Engineer **Feb 2026 - Present**
Oracle ***Bangalore, Karnataka***

- Building a scalable Rules Studio platform for defining and managing configurable rules.
- Led the end-to-end design and implementation of the Rule Management service, enabling creation and management of configurable rulesets with reusable rules and functions.
- Led the end-to-end design and implementation of execution flows modeled as Directed Acyclic Graphs (DAGs), enabling dependency-driven orchestration of rulesets and repeatable ruleset collections for iterative execution.
- Designed a distributed caching strategy for rules execution, using local Caffeine caches for compiled runtime objects and shared OCI Cache for cross-pod flow metadata and freshness state.

Software Engineer 3 **Aug 2024 - Jan 2026**
Walmart ***Bangalore, Karnataka***

- Worked on contract management system for Walmart's global markets, replacing manual processes with automated tracking to enhance sourcing efficiency.
- Independently owned and developed an event-driven contract workflow service using Camunda and Kafka; integrated DocuSign for seamless signing between Walmart sourcing managers and suppliers. Within 6 months of launch, the platform tracked over $3.6 billion in contract value, providing end-to-end visibility and workflow automation across the contracting lifecycle.
- Led GenAI integration initiative to enable contextual search on large contracts, allowing customers to retrieve critical information within minutes using natural language prompts.
- Implemented an end-to-end audit trail with full versioning and traceability.
- Migrated contract management service to Spring boot 3, improved DevOps score by 50% ensuring best coding practices, no SonarQube issues, reducing code vulnerabilities and having proper monitoring dashboards for health checks, errors and API latency.
- Automated E2E testing using Cypress to ensure reliable user flows.

Software Engineer **July 2023 – Aug 2024**
PayPal ***Chennai, Tamil Nadu***

- Worked on managing the full lifecycle of payment disputes, from creation to settlement.
- Developed APIs to enhance fraud detection by integrating compliance and risk data, reducing case review time by 25% for risk back-office agents.
- Built a feature in Lead ingestion service to prevent disqualified risk leads from getting published to primary AMQ, and ingest them into separate AMQ for further processing in downstream microservice.
- Reduced run time for Integration and E2E tests by 25% by using multi threading concepts.
- Worked on refactoring code, reducing code smells, and maintaining code coverage in the existing code base achieving nearly 95% coverage.

Software Engineer **Jan 2022 – July 2023**
Amazon ***Gurugram, Haryana***

- Built a reusable validation library and API for invoice processing, enabling validation of 10K+ invoices per day during initial launch phase.
- Developed vendor-initiated billing functionality to compare vendor-submitted invoices with Amazon-generated invoices.
- Delivered an end-to-end solution for managing business configurations using AWS AppConfig, reducing config update time from a full day to under an hour.
- Minimized false alarms and reduced operational overhead by 19% through implementation of a robust retry strategy for recoverable service faults (e.g., throttling).
- Set up metrics dashboard to monitor traffic on system e.g. P95 Latency, API invocation metric using CloudWatch and CDK.

Technical Skills

Languages: Java, Kotlin, C/C++, Python
Dev. Tools: Spring Boot, Kafka, Apache Spark, Apache Airflow, PostgreSQL, NoSQL, Prometheus, Grafana, Elasticsearch
Testing Frameworks: JUnit, Cucumber, TestNG, JMeter, Cypress
Cloud and DevOps: AWS (ECS, Lambda, DynamoDB, S3, AppConfig), Docker, Kubernetes, Jenkins, Git, CI/CD
Core Competencies: Microservices Architecture, Event-Driven Systems, Data Structures & Algorithms, System design

Education

ABES Engineering College **Aug 2018 – May 2022**
Bachelor of Technology, Information Technology ***GPA: 8.8***
